DIGITAL LITERACY PROJECT REPORT

Submitted By: Akshat Grover

Registration No.: 25BAI10763

Branch: B.Tech CSE (AI/ML)

INTRODUCTION

- This project was created as part of the Digital Literacy course.The aim of this assignment was to improve digital awareness, communication skills, online professionalism, and cyber safety.The project included infographic design, portfolio building, coding platforms, email etiquette, and cybercrime awareness.

Task 1 – Digital Literacy Infographic

- For Task 1, an infographic was created using Canva. The infographic included topics such as digital literacy, safe internet practices, email etiquette, and professional online presence.Canva was easy to use because of its templates and icons. The difficult part was arranging all the information in one slide without making it look crowded.

TASK 2 – STUDENT DIGITAL PORTFOLIO

- For this task, profiles were created or updated on GitHub, LinkedIn, Kaggle, and HackerRank.GitHub was used to upload project work, LinkedIn was used for professional networking, Kaggle was used for data science learning, and HackerRank was used for coding practice.

- HackerRank Profile:
- https://www.hackerrank.com/profile/akshat_25bai1071

TASK 3 – CODING & COLLABORATION PLATFORMS

- In this task, HackerRank was used to solve a beginner-level coding challenge. A Google Form was also created with five questions about digital literacy awareness.These tools are useful because they help in coding practice, collaboration, and collecting responses from classmates.

- Google Form Link:

Task 4 – Professional Email & Etiquette

- Two professional emails were written.One email requested an assignment extension from a professor, while the other expressed interest in a summer internship. A social media checklist was also prepared with do's and don'ts. This task showed the importance of polite language, clear subject lines, and professional communication.

Task 5 – Cybercrime Awareness

- For this task, a case study on phishing and online payment fraud was prepared.The study explained how cybercrime happens, who is targeted, and its effects. A prevention checklist was also created with tips like using strong passwords, avoiding unknown links, enabling two-factor authentication, and reporting fraud through cybercrime.gov.in or helpline 1930.

CONCLUSION

- This project helped improve knowledge about digital tools, online communication, coding platforms, and cyber safety. It also showed the importance of maintaining a professional digital presence.These skills will be useful in academics, internships, and future jobs.
